Because the Fund normally invests in common stocks of companies engaged in natural resources-related activities in a limited geographical sector, the Fund's performance largely depends on the overall economic condition of that industry and geographical sector. Additionally, diplomatic, political or economic developments in foreign countries could adversely impact the Fund's investment in securities of foreign companies.

The S&P Composite1500® Index is a widely recognized, unmanaged index of 1500 stock prices chosen for market size, liquidity, and industry group representation. It is a market-value weighted index (stock price times number of shares outstanding), with each stock's weight in the index proportionate to its market value.

The S&P 1500® Energy Index comprises those companies included in the S&P Composite 1500 that are classified as members of the GICS® energy sector.
